The World Mosquito Program is working in Vietnam to protect communities from mosquito-borne diseases like dengue, Zika, chikungunya and yellow fever.

The World Mosquito Program (previously called Eliminate Dengue) was established in Vietnam in 2006, with oversight by the Ministry of Health. We have partnered with the Vietnamese Government to bring our Wolbachia method to local communities in Vinh Luong and Tri Nguyen Island.

The first phase of releases of Wolbachia-carrying Aedes aegypti mosquitoes took place on Tri Nguyen Island, near Nha Trang City in Khanh Hoa Province, in 2013.

From March until June 2018, we carried out our first releases of Wolbachia-carrying mosquitoes on mainland Vietnam. The project is located in Vinh Luong, a community north of Nha Trang, the coastal capital of Khanh Hoa Province.
Mosquito-borne disease outbreaks place a lot of pressure on communities and local health systems in Vietnam. We already have a lot of support for our innovative solution and we're really excited to be working with local health authorities and the community to bring our Wolbachia method to Vinh Luong.

Truong Xuan Do is a 79-year-old retiree living in Vinh Luong. Beginning with his career in the military, Truong has many years’ experience as a medical associate and has been a part of a medical profession that has been struggling with dengue fever for many years.

Truong has been affected personally by the harmful dengue virus, with three of his grandchildren suffering from dengue fever, involving expensive medical bills.

Many (Vietnamese) people have limited knowledge about dengue risks, and don’t pay attention to disease prevention measures. Thus, many people have acquired dengue. The disease is very dangerous and can be fatal. Patients with dengue often become very unwell, and family members have to accompany them to the hospital.

Truong says that he is very meticulous, following guidance provided by local health workers to ensure he is taking every possible precaution to minimise mosquito breeding sites in and around his home. Truong is a vocal supporter of the World Mosquito Program’s Wolbachia method in his community, giving community members information about our work.

First releases in Vinh Luong welcomed by community members

In March 2018, the World Mosquito Program began its first releases of Wolbachia-carrying mosquitoes in mainland Vietnam. The project is located in Vinh Luong, a community north of Nha Trang, the coastal capital of Khanh Hoa Province.

In addition to the Oceania Office in Melbourne, Australia, the World Mosquito Program has a regional Asian Hub in Ho Chi Minh City, Vietnam and plans for an Americas Hub in Panama City, Panama.
