The World Mosquito Program is working in Vietnam to protect communities from mosquito-borne diseases like dengue, Zika, chikungunya and yellow fever.

The World Mosquito Program (previously called Eliminate Dengue) was established in Vietnam in 2006, with oversight by the Ministry of Health. We have partnered with the Vietnamese Government to bring our Wolbachia method to local communities in Vinh Luong and Tri Nguyen Island.

From March until June 2018, we carried out our first releases of Wolbachia-carrying Aedes aegypti mosquitoes on mainland Vietnam. The project is located in Vinh Luong, a community north of Nha Trang, the coastal capital of Khanh Hoa Province.

The first phase of releases of Wolbachia-carrying Aedes aegypti mosquitoes took place on Tri Nguyen Island, near Nha Trang City in Khanh Hoa Province, in 2013.

Monash/WMP used reasonable efforts to confirm this data was up-to-date at the time of publication. Please email contact@worldmosquito.org for our most recent data.
Mosquito-borne disease outbreaks place a lot of pressure on communities and local health systems in Vietnam. We already have a lot of support for our innovative solution and we're really excited to be working with local health authorities and the community to bring our Wolbachia method to Vinh Luong.

Nguyễn Bình Nguyên
World Mosquito Program Project Field Coordinator in Vietnam

First releases in Vinh Luong welcomed by community members

In March 2018, the World Mosquito Program began its first releases of Wolbachia-carrying mosquitoes in mainland Vietnam. The project is located in Vinh Luong, a community north of Nha Trang, the coastal capital of Khánh Hòa Province.

Trương Xuân Đỗ is a 79-year-old retiree living in Vinh Luong. Beginning with his career in the military, Trương has many years’ experience as a medical associate and has been a part of a medical profession that has been struggling with dengue fever for many years.

Trương has been affected personally by the harmful dengue virus, with three of his grandchildren suffering from dengue fever, involving expensive medical bills.

Trương says that he is very meticulous, following guidance provided by local health workers to ensure he is taking every possible precaution to minimise mosquito breeding sites in and around his home. Trương is a vocal supporter of the World Mosquito Program’s Wolbachia method in his community, giving community members information about our work.

Many (Vietnamese) people have limited knowledge about dengue risks, and don’t pay attention to disease prevention measures. Thus, many people have acquired dengue. The disease is very dangerous and can be fatal. Patients with dengue often become very unwell, and family members have to accompany them to the hospital.

About us

The World Mosquito Program is an international, not-for-profit initiative that works to protect the global community from mosquito-borne diseases including dengue, Zika, chikungunya and yellow fever.

Our approach has widespread support from communities, governments, research institutes and philanthropic partners around the world. Through collaboration and innovation, we can make a difference to millions of lives.

Currently the World Mosquito Program works in 11 countries in Asia, the Pacific and the Americas. Our aim is to protect 75-100 million people over the next five years.

In addition to the Oceania Office in Melbourne, Australia, the World Mosquito Program has a regional Asian Hub in Hô Chí Minh City, Vietnam and plans for an Americas Hub in Panama City, Panama.

These hubs support projects in their respective regions and contribute to core global operations.
